

Green Head Volunteer Bush Fire Brigade

Notice to Fire Fighters

NOTFF Subject: Installation of Mobile Phone Aerials in Appliances

NOTFF Date: 1st Feb 2010

NOTFF Revision: No

NOTFF Number: NOTFF- 00012

Introduction:

Following on from the Marchagee Track incident in December, a significant issue was the lack of mobile phone signal on the fire ground. As an aid to this issue, external aerials have now been fitted to both the Light Tanker and the 3.4.

Aerial Details:

The aerials purchased are RFI CD2195 High Gain 6.5dbi with a Male FME Connector .

Mounting:

The aerials have been mounted on the Targa Bar on the Light Tanker and on the Bull Bar on the 3.4

Connection Points:

The connection points are positioned behind the seats of both vehicles.

Patch Leads:

A patch lead will be required to connect your phone to the aerial, individuals will be required to supply their own patch lead to suit their specific mobile phones. Patch leads cost around \$15.00 and can be obtained from Telstra or the many online stores available.
